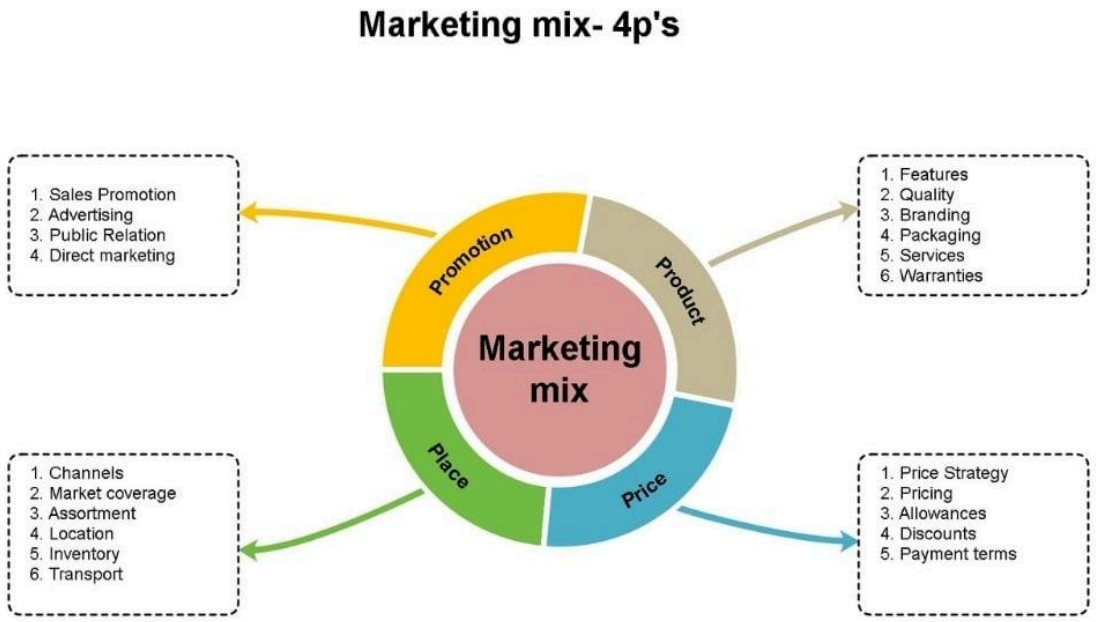
Marketing Mix Strategies, Marketing Mix and Customer Behaviour

---

1. ACTIONABLE STRATEGIES USING MARKETING MIX (4Ps)

MARKETING MIX MODEL



A. PRODUCT STRATEGY

Strategies

- Make products based on customer needs
- Add features from customer feedback
- Improve quality and design

- Give customization options

Outcomes

- Higher customer satisfaction
- More people buy the product
- Less product returns

B. PRICE STRATEGY

Strategies

- Change price based on demand
- Give offers and discounts
- Use pricing like ₹99
- Provide combo offers

Outcomes

- Increase in sales revenue
- Better conversion rate
- Higher profit

C. PLACE STRATEGY

Strategies

- Sell online and offline
- Improve delivery system
- Use e-commerce platforms
- Keep stock in high-demand areas

Outcomes

- Faster delivery
- Wider market reach
- Better customer convenience

D. PROMOTION STRATEGY

Strategies

- Use social media and email marketing
- Show personalized ads
- Use influencers
- Give loyalty and referral offers

Outcomes

- More clicks (CTR)
- Better customer engagement
- Increase in sales

INTEGRATED MARKETING MIX APPROACH

- Combine all 4Ps to create a data-driven marketing strategy
- Use analytics to monitor performance
- Continuously optimize strategies based on results

---

3. IMPORTANCE OF CUSTOMER BEHAVIOUR

WHY CUSTOMER BEHAVIOUR IS IMPORTANT

1. Better Understanding of Customer Needs

- Helps companies design products that match customer expectations

---

2. Effective Targeting and Segmentation

- Identify specific customer groups
- Deliver personalized marketing

---

3. Improved Marketing Strategy

- Select right product, price, place, and promotion
- Increase effectiveness of campaigns

---

4. Higher Customer Satisfaction

- Meet customer expectations
- Build long-term relationships

---

5. Increased Sales and Profit

- Right product to right customer at right time
- Improves conversion rate

---

6. Customer Retention and Loyalty

- Understand repeat purchase behaviour
- Provide personalized offers

FACTORS AFFECTING CUSTOMER BEHAVIOUR

- Personal factors (age, income, lifestyle)
- Psychological factors (motivation, perception)
- Social factors (family, culture)

SELLING PROCESS IN ANALYTICS

Selling process in analytics is the step-by-step method of selling a product using data and analysis to improve decisions, increase sales, and understand customer needs.

STEPS IN SELLING PROCESS WITH ANALYTICS

---

1. PROSPECTING (Finding Customers)

- Identify potential customers (leads)

Role of Analytics:

- Analyze customer data to find target audience
- Use past purchase data and online behavior
- Segment customers based on age, interest, location

---

2. LEAD QUALIFICATION

- Check which leads are likely to buy

Role of Analytics:

- Lead scoring using data models
- Predict which customers have high buying probability
- Focus only on valuable leads

---

3. APPROACHING THE CUSTOMER

- First interaction with the customer

Role of Analytics:

- Choose best time and communication channel
- Personalize message using customer data
- Improve customer engagement

---

4. PRESENTATION / DEMONSTRATION

- Explain product features and benefits

Role of Analytics:

- Recommend products based on customer preferences
- Use past data to show relevant offers
- Improve conversion rate

---

5. HANDLING OBJECTIONS

- Solve customer doubts and issues

Role of Analytics:

- Analyze common objections from past data
- Provide solutions based on previous successful sales

- Improve decision making

---

6. CLOSING THE SALE

- Final step where customer buys the product

Role of Analytics:

- Predict best pricing and discount strategy
- Identify right time to close deal
- Increase success rate

---

7. FOLLOW-UP AND CUSTOMER RETENTION

- Maintain relationship after sale

Role of Analytics:

- Track customer satisfaction
- Predict future purchases
- Provide personalized offers
- Improve customer loyalty

ANALYTICS TECHNIQUES USED

- Predictive analytics (future buying behavior)
- Customer segmentation
- Data mining
- Machine learning models
- CRM analytics

BENEFITS OF SELLING PROCESS IN ANALYTICS

- Better understanding of customer needs
- Increased sales and revenue
- Improved decision making
- Reduced marketing cost
- Higher customer satisfaction
- Personalized selling

SALES PLANNING

Definition

Sales Planning is the process of **estimating future sales and preparing strategies** to achieve sales targets effectively.

SALES PLANNING PROCESS

STEPS IN SALES PLANNING

---

1. SALES FORECASTING

- Estimate future sales based on past data and market trends

Methods:

- Historical data analysis
- Market research
- Predictive analytics

---

2. SETTING SALES OBJECTIVES

- Define clear and measurable sales goals

Examples:

- Increase sales by 20%
- Achieve monthly revenue target

---

3. IDENTIFYING TARGET MARKET

- Select customer groups to focus on

Examples:

- Age group, income level, location

---

4. SALES STRATEGY DEVELOPMENT

- Plan how to achieve sales targets

Includes:

- Pricing strategy
- Promotion strategy
- Distribution channels

---

5. RESOURCE ALLOCATION

- Allocate budget, workforce, and tools

Examples:

- Sales team size
- Marketing budget

---

6. SALES EXECUTION

- Implement the sales plan

Activities:

- Selling products
- Customer interaction
- Campaign execution

Importance:

- Converts plan into action

---

7. PERFORMANCE MONITORING AND CONTROL

- Track actual performance vs targets

Metrics:

- Sales volume
- Revenue
- Conversion rate

Importance:

- Helps in corrective actions

ROLE OF ANALYTICS IN SALES PLANNING

- Forecast future sales accurately
- Identify high-performing products
- Optimize pricing and promotions
- Improve customer targeting
- Monitor real-time performance

TYPES OF SALES PLANNING

- Short-term planning (monthly, quarterly)
- Long-term planning (yearly strategy)
- Strategic planning (overall direction)
- Tactical planning (day-to-day actions)

BENEFITS OF SALES PLANNING

- Better decision making
- Increased sales and profit
- Efficient resource utilization
- Improved customer satisfaction
- Reduced risks
